**Official Announcement for Infinitus Token ICO Crowdsale Launch on GBX Grid**

18ᵗʰ August 2018, Singapore –Official ICO Crowdsale Launch of INFINITUS TOKEN – A Smart Designation Repository on the Gibraltar Blockchain Exchange Grid (GBX Grid)

**Be Prepared . Take Control**

Infinitus Token is a blockchain based decentralised mobile app (dApp) It allows you to store encrypted digital data such as private keys, passwords, recovery seeds, pincodes or any alphanumeric data on a decentralised network. Upon a predetermined triggered event, your private data will be transferred to a designated receiver.

Infinitus works by fragmenting, replicating, encrypting, and distributing your private data across the blockchain network. INF uses the Ethereum Smart Contract with the File System Distributed Ledger Technology (FSDLT) across a decentralised network via the InterPlanetary File System (IPFS/IPNSS) protocol.
The INF mobile app is a decentralized application (dApp) that is designed for both iOS and Android smartphones.

**A Must-Have Application for Every Cryptocurrency Wallet Owner!**

Every cryptocurrency user needs a wallet to store their crypto assets. Infinitus (INF) is an accessible and user friendly mobile app that complements all your existing cryptocurrency wallets- web-based, mobile, hardware, desktop and paper.

Infinitus Token solves a problem that has been plaguing the crypto community for a long time. With the burgeoning growth and massive adoption of cryptocurrency globally, we believe that the listing of INF Tokens on GBX will provide every cryptocurrency user in the world access to the INF Smart Designation Repository services on our mobile app. the crypto community. INF is set to be one of the most promising companies to look out for in 2018.

Visit www.infinitustoken.io to find out how to purchase your INF Token on the GBX Grid.

About Infinitus

Before Infinitus, losing your key meant saying goodbye to your crypto wallet and whatever it was storing. And solving this issue was what led the INF team to come up with a blockchain-based storage application that would eliminate this very frightening prospect. Allowing users to encrypt and store a variety of alphanumeric data on a decentralized network securely, Infinitus also ensures that only the designated recipient is able to access it upon a predetermined inactivity trigger.
